

I have added the new functions to the services according to the new instructions

I have added new fields(like boardId and assignee) to the business layer class according to the new instructions

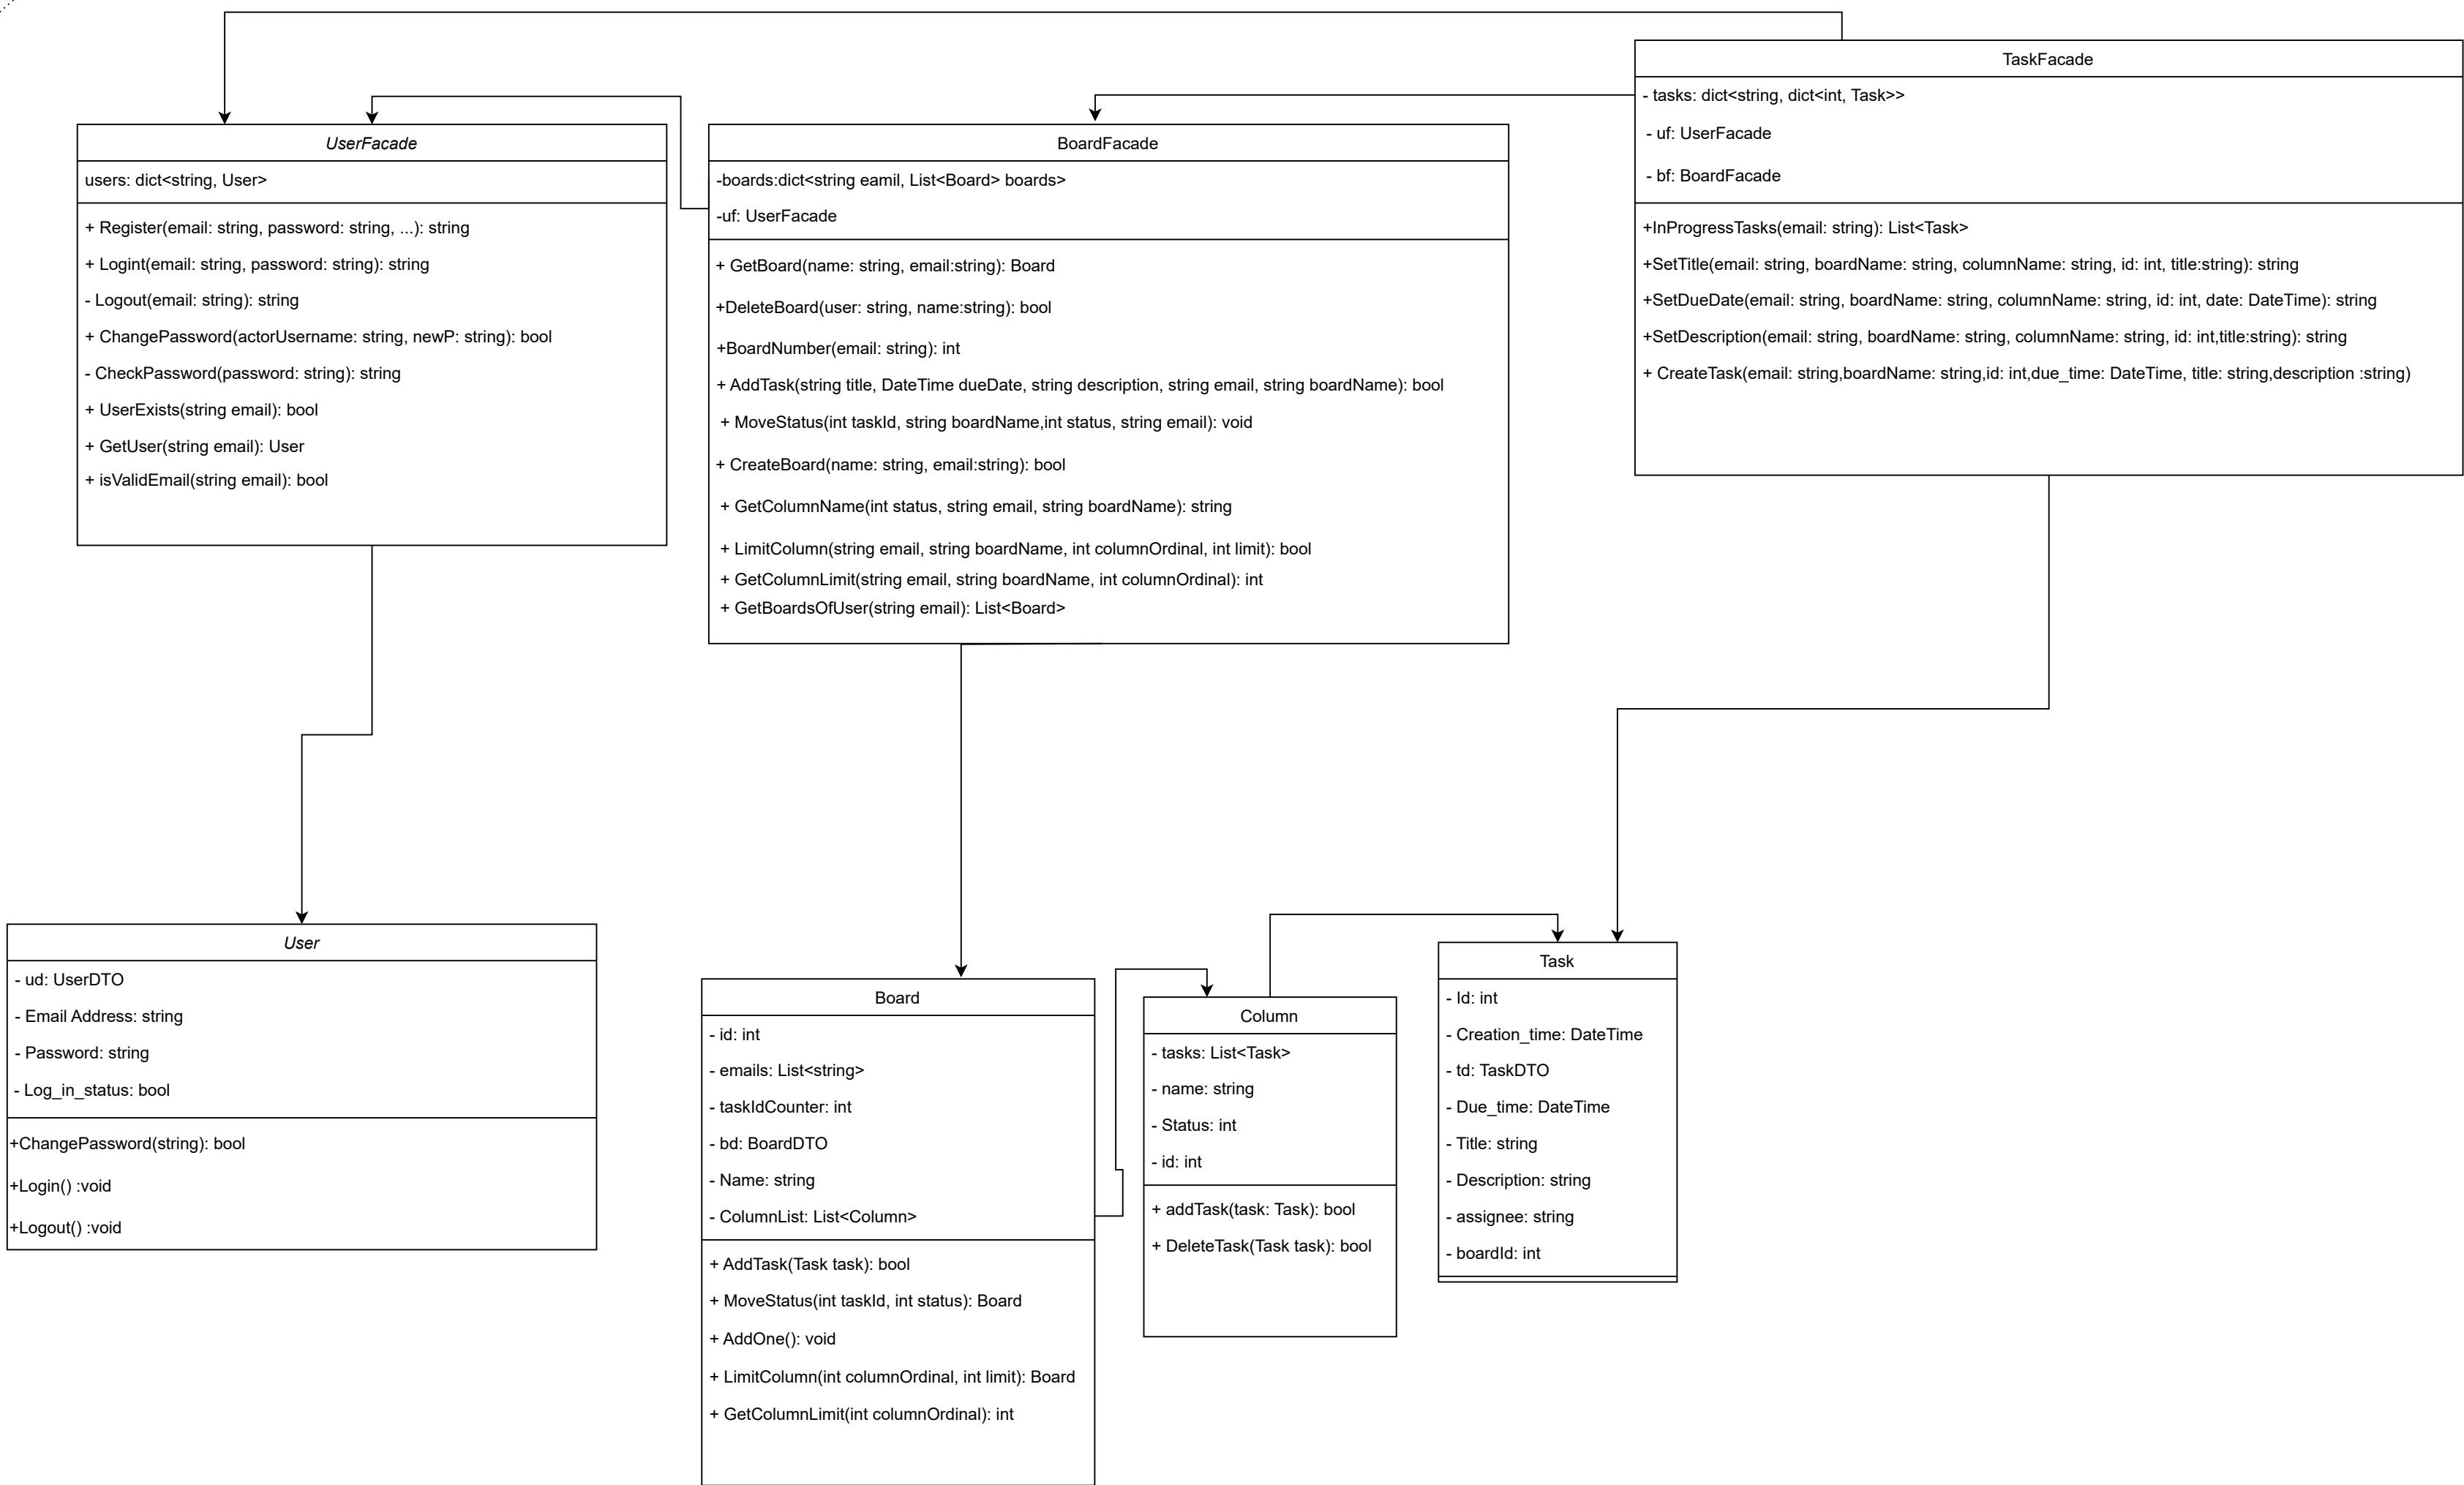

I have added data access layer and its classes

I added UserDTO variable to user, and the same thing for board and task

Service Layer

Business Layer

*all constructors, getters and setters wern't written for convenience reasons

DataAccessLayer

In every dto class, there are only getters and setters
